1. The first part of the paper is devoted to a general  
discussion of the problem. It is shown that the  
problem is of great importance in the theory of  
functions. The problem is to find the function  
which is analytic in the interior of the unit circle  
and which has the given values on the boundary.  
The problem is solved by the method of conformal  
mapping. The function is found to be  
$$f(z) = \frac{1}{2\pi i} \int_{\Gamma} \frac{\phi(\zeta)}{\zeta - z} d\zeta$$
  
where  $\Gamma$  is the boundary of the unit circle and  
 $\phi(\zeta)$  is the function which is analytic in the  
interior of the unit circle and which has the  
given values on the boundary. The function  
is found to be analytic in the interior of the  
unit circle and has the given values on the  
boundary. The problem is solved.
